

1. PROJECT OVERVIEW

- **Project Title:** ComicCraft - AI Comic Story Creator using Gemini Models

2. TARGET AUDIENCE & PERSONA

- **Target Audience:** Aspiring scriptwriters, literature students, independent authors, and hobbyists.
- **User Persona:** "Karthik" - A 20-year-old creative writing student. He excels at building fictional worlds and writing dialogues but has zero drawing skills. He wants to pitch his story ideas visually but cannot afford to hire an artist.

3. EMPATHY MAP BREAKDOWN

What the User SAYS:

- "I can describe my characters perfectly in words, but I can't sketch them."
- "Standard AI tools give me random pictures, but they don't flow like a story."
- "I just want a tool where I type my story, and it gives me a finished comic page."

What the User THINKS:

- "Formatting images and text together takes too much time."
- "Why isn't there an AI that handles both the writing and the drawing simultaneously?"
- "If I could generate a PDF of my story, I could easily share it with publishers or friends."

What the User DOES:

- Writes detailed scene descriptions in text editors.
- Spends hours trying to prompt basic AI image generators, often getting frustrated by the lack of consistency.

- Abandons the idea of making a comic due to the complexity of layout software.

What the User FEELS:

- **Restricted:** Because his imagination is confined strictly to text.
- **Overwhelmed:** By the steep learning curve of digital art and formatting tools.
- **Excited:** By the possibility of AI completely automating the illustration process.

4. PAINS AND GAINS

- **Pains:** The high cost of professional artists, the steep learning curve of graphic design, and the tedious nature of manually compiling text and images.
- **Gains:** Instant realization of visual ideas, a streamlined workflow requiring zero technical skill, and a ready-to-share offline document.
