

1. PROJECT OVERVIEW

- **Project Title:** ComicCraft - AI Comic Story Creator using Gemini Models
- **Domain:** Artificial Intelligence & Application Development

2. TEAM COMPOSITION

This document formalizes the formation of the student team responsible for designing, developing, and deploying the ComicCraft AI platform.

- **Team ID:** SWTID-2026-2758
- **Team Size:** 5 Members
- **Team Leader:** Mohamed Afzal Peermohamed
- **Team Members:** Mohamed Barith, Abdul Hameed M, Mahateer, Noufal

3. ROLES AND RESPONSIBILITIES (WORK BREAKDOWN)

To ensure an agile and highly efficient development lifecycle, the technical workloads have been strategically distributed among the team members based on their core competencies:

- **Mohamed Afzal Peermohamed (Project Lead & Backend Developer):**

Responsible for overall project orchestration, setting up the local virtual environments, and coding the core asynchronous routing logic using the FastAPI framework.

- **Mohamed Barith (AI Logic Engineer):**

Tasked with integrating the Google Gemini 1.5 Flash and Pro APIs. Responsible for parsing the user prompts and handling the JSON narrative structuring.

- **Abdul Hameed M (Visual AI Specialist):**

Responsible for managing the Hugging Face Stable Diffusion pipeline. Handles the asynchronous image downloads and the Python PIL emergency fallback scripts.

- **Mahateer (Frontend & UI Designer):**

Tasked with developing the user-facing web interface. Responsible for writing the HTML/CSS forms and configuring the Jinja2 templating engine for the live browser preview.

- **Noufal (Document Engine & QA Tester):**

Responsible for coding the FPDF layout mathematics to ensure the final document compiles perfectly. Also handles performance testing and network failure simulations.

4. COLLABORATION STRATEGY

The team will utilize centralized Git version control for code integration and conduct bi-weekly sprint reviews to track API integration progress and debug system errors collaboratively.
